

Accessibility Findings - COMP 584 HW3

I used Chrome Lighthouse to test the accessibility of my Marvel Tokon HW3 page. I also tested the MDN HTML Elements Reference page so I could compare my results with another website. I checked desktop and mobile views to make sure my layout and images adjusted to different screen sizes as per the instructions. My Marvel Tokon page received an accessibility score of 91. Lighthouse found that some background and foreground colors did not have enough contrast. It also reported that the page did not have a main landmark. These results show that the footer colors could be darker and that the main content could use a main landmark. Lighthouse also listed items that still require manual testing. I also used Lighthouse on the MDN HTML Elements Reference page that you provided previously. The MDN page received an accessibility score of 95. Lighthouse reported that some ARIA attributes did not have valid values. MDN scored higher than my page, but the test showed that professional websites can still have accessibility warnings.

Pros of my page: the images have descriptive alt text, the button is large and easy to see, the background section uses a dark overlay to make the white text readable, and the page adjusts to mobile screen sizes.

Cons of my page: Lighthouse found a color contrast problem and the page is missing a main landmark.

The MDN page received an accessibility score of 95. Lighthouse reported that some ARIA attributes did not have valid values. It also listed identical links with the same purpose as a best-practices issue. MDN scored higher than my page, but the test showed that professional websites can still have accessibility warnings.

Pros of the MDN page: it received a higher accessibility score, has clear page navigation, uses readable text, and organizes its information into visible sections.

Cons of the MDN page: Lighthouse found invalid ARIA values and reported identical links with the same purpose. The desktop screenshot shows the email centered inside the browser with the hero image, progress information, background image, and button displayed in one column. The desktop layout keeps the email at a readable width while leaving space around the email content. The mobile screenshot below was taken at a width of 375 pixels. The headline wraps onto two lines and the hero image becomes smaller without causing horizontal scrolling.

Marvel Tokon Rank Progress

Welcome to my Marvel Tokon progress report. I created this email template not just for the project but also to keep track of the characters I am currently using and my progress in ranked.

Current Team: Spider-Man, Ms. Marvel, Black Panther, and Blade

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

BEST PRACTICES

▲ Document does not have a main landmark.

These items highlight common accessibility best practices.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

HTML elements reference

This page lists all the [HTML elements](#), which are created using [tags](#).

They are grouped by function to help you find what you have in mind easily. An alphabetical list of all elements is provided in the sidebar on every element's page as well as this one.

Note:

For more information about the basics of HTML elements and attributes, see [Anatomy of an HTML element](#).

Main root

Element	Description
<code><html></code>	Represents the root (top-level element) of an HTML document, so it is also referred to as the <i>root element</i> . All other elements must be descendants of this element.

ARIA

{aria-*} attributes do not have valid values

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

BEST PRACTICES

Identical links have the same purpose.

These items highlight common accessibility best practices.
